

Clothing Collection Dashboard using Power BI

Data Analysis & Visualization Project

Name: TANK RUTIK J

Power BI

Introduction to the Project

Overview and Purpose

Tool Used

This project is built using Microsoft Power BI Desktop for data transformation and visualization.

Dataset Source

Based on a comprehensive Clothing Collection / Retail Products dataset containing sales transactions and inventory logs.

Key Analysis Areas

Sales Performance Analysis

Profitability & Margins

Product Performance Evaluation

Stock & Inventory Levels

Revenue Trends Over Time

Objectives of the Dashboard

Project Goals & Strategic Purpose

Data Analysis

To thoroughly analyze clothing sales data to reveal underlying patterns and performance metrics.

Decision Support

To support business decision-making by providing actionable insights derived from raw data.

Targeted Analytical Goals

Identify top-performing brands and products

Understand revenue trends over time

Analyze profit margins and stock efficiency

Tools and Dataset Used

Technical Stack & Data Structure

Microsoft Power BI Desktop

Primary tool for data modeling, DAX calculations, and visualization.

Clothing Collection Dataset

Source data in Excel format containing transactional retail records.

Data Processing

Data cleaning, transformation, filtering, and preparation done using Power Query Editor.

Key Dataset Fields

Brand	Category
Product Name	Price
Cost Price	Final Price
Revenue_Potential	Profit_per_Unit
Stock Quantity	Date
Season	Size

Measures Used in Power BI

DAX (Data Analysis Expressions) Calculations

Revenue Analysis

Core financial metrics to track total sales volume and revenue generation across all brands.

Profitability Metrics

Calculated fields to determine margins, per-unit gains, and overall business health.

Inventory Management

Measures focused on stock quantities, inventory valuation, and discount impact.

DAX Measures Created

Total Revenue

Total Cost

Total Profit

Profit Margin %

Total Stock

Avg Profit per Unit

Average Discount

Inventory Value

Clothing Sales

Overview

This page provides a comprehensive snapshot of overall business performance, highlighting key metrics and trends.

Charts

Data visualization for trends & comparisons.

Revenue by Year

Revenue by Brand

Monthly Trend

Why Page 1 is Important

Clothing Sales Overview & Business Impact

Strategic Snapshot

Serves as the executive summary of the dashboard, offering an immediate view of the organization's health without needing to drill down.

Decision Support

Empowers management to spot anomalies and opportunities instantly, facilitating data-driven agile decision-making.

Key Benefits & Insights

Gives quick summary of business performance

Helps understand yearly sales growth

Shows top-performing brands & leaders

Displays comprehensive monthly sales trends

Clothing Product Performance

This page details product-level analysis, identifying best-selling items, comparing category profitability, and supporting pricing strategies.

Product Performance Analysis

Key Metrics

Performance indicators for products.

Total Revenue

Total Profit

Avg Profit per Unit

Revenue Charts

Breakdown of sales by product dimensions.

Top 10 Products

Revenue by Category

Profit Analysis

Profitability and pricing insights.

Most Profitable

Price vs Revenue

Why Page 2 is Important

Value of Product Performance Analysis

Best-Sellers

Identifies best-selling products to understand what drives revenue.

Profitability

Shows most profitable products to focus on high-margin items.

Strategic Decision Support

Helps compare Product Categories

Supports data-driven Pricing Strategy

Helps in Product Promotion planning

Optimizes future Stock Planning

Key Insights

Critical Findings from Dashboard Analysis

Business Potential is Strong

Total revenue analysis indicates a healthy growth trajectory. The current sales volume suggests significant market demand across key categories.

High

Brand Performance

Top 3 brands contribute strongly to total sales.

Seasonality Peaks

Sales peak during festive and seasonal periods.

Profit Drivers

Premium products drive the best margins.

Inventory Control

Some categories show overstock after season.

Future Scope / Improvements

Enhancing the Dashboard for Better Insights

Supplier Analysis

Integrate supplier performance metrics to track delivery times and quality.

Smart Alerts

Implement automated low-stock notifications to prevent inventory shortages.

Sales Forecasting

Use predictive analytics to forecast future sales trends and demand.

Interactive Features

Drill-Through Pages for deeper data granularity

Custom Tooltips for instant context on visuals

Real-time Data integration capabilities

Mobile Layout optimization for remote access

Automated Reporting via email subscription

Thank You.
